

Airside Maintenance of Building Air Conditioning Systems

1 Day Seminar

DESCRIPTION:

Designed for commercial and industrial building maintenance employees, this training seminar emphasizes understanding of the importance of airflow to the compression refrigeration cycle.

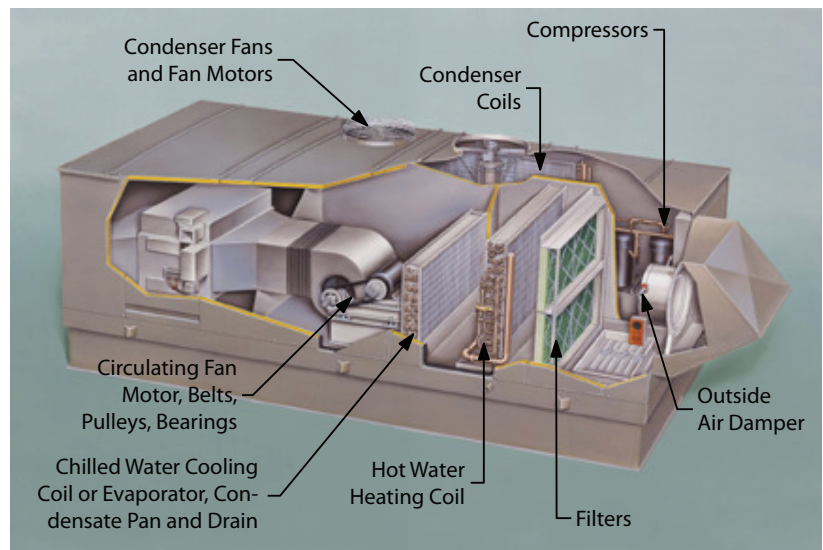

Seminar attendees will learn how to identify potential problems before they escalate into system failures, recognize the need for proper filter changes and coil cleaning procedures.

The Airside Maintenance seminar utilizes the latest information on equipment, service tools, and refrigerant safety while maintaining a completely non-commercial approach with no brand preference.

Every on-site seminar addresses only the air conditioning systems in use at that facility. This seminar can be expanded to two days to allow time for hands-on exercises.

Each student receives:

- 1 Published textbook "Airside Maintenance"
- 2 Course Certificate
